california possesses a delightful winter climate. Almost every day is balmy and full of sunshine. To live in such air a few months may save you a big doctor bill. It doesn't cost much to try. The Frisco line and Santa Fe route will carry you to Los Augles. San Diego or San Francisco any day, on fast vestibuled express train, in Pulman or tourist siesper. The jay ney is through New Mexico and Arizona. Where leavy snowfalls seldom come. It is short, quick and comfortable—straight across not round about. Once a week personally-conducted excursions are run to the Pacific cost in tourist siespers. Sudgwick, Kansas, Jap., II, 1884, 49 dt. Is for the erection of one frame building with ice house and other attachments. Plans and specifications can be seen at the office of H. S. Mueller. The creamery company reserves the right to sceept any, or reject all bids. H. S. Mueller, Pres. Sedgwick, Kansas, Jan. 11, 1881, 49 dt.

Tucker's restaurant have moved to tip East Douglas. We are the oldest and largest restaurant in the city. Open day and might.

The practical coal kindler, Weir City

where beavy snowfalls seldom come. It is short, quick and comfortable—straight caross, not round; about composition to the pacific cases in tourist sleepers. Competent porters and agents in charge. Second class tickets bonored, and good care taken of indices and children without escort. Very cheap rates for one way or round trip, now in effect. Write to D. Wishart, G. P. A. Frisco line, St. Louis, Mo., for copy of California excursion leaf let and a handsom-ity illustrated book entitled "To California and Back." Nearest seems agent of Frisco line or Santa Fe

A SNOWFLAKE'S COMPOSITION.

The Crystalised Water Is Really Blue, Not White. The first snow of winter is always hailed with mingled feelings of pleasure and apprehension. The youngsters welcome it with unalloyed delight, but their elders realize that it is but the harbinger of many and more severe storms which will bring misery to some and discomfort to all. But even these cannot but admire the beauty of the little crystals of water as they fall so softly and gently from the skies. Even of mankind. It came rather as a

shock to learn, as the realistic painters showed and the philosophers corroborated, that the snow was not white, but blue; a faint and delicate blue it is true, but one well marked in deep shadows and exactly that of water when viewed in large masses. Pure water in small bulk is almost perfectly transparent, but in large masses gives a distinctly blue tint to white objects when seen through it. So the whiteness of the snow, due to interference of the light by the reflection and refraction of the innumerable facets of minute crystals, is found to be tinged with blue when these interferences are sufficiently numerous. For snow is nothing more than crys-

talized water, and its beauty in mass is surpassed by the beauty of some of the individual crystals which eatch on sleeve or fall on the ground, when examined closely by the eye or, still better, when looked at through a magnifying glass. Multitudes of forms of all degrees of complexity from the slender, straight needle to the most complicated starlike figures have been drawn and described, but in spite of this great diversity they are all absolutely uniform in their primary design, that of the hexagonal prism. The ordinary form is that of six straight needles of ice radiating from a common center, and the straight needles occasionally seen are regarded as broken or incomplete specimens of this class, but each of these needles is capable of throwing put other needle-like branches, always at symmetrical distances and always at an angle of 60 or 120 degrees. Occasionally little plates are seen, but these also are invariably six-sided planes, the angles of which are still 120 de-

What is the meaning of this rigid adherence to a certain geometrical form? Evidently the result is the action of physical force on the individual molecules which make up the crystals, and evidently also this force is either all-pervading or else inherent in the molecules themselves, for the crystals figured by Arctic explorers and those found in the mountains of the Andes are practically identical. There is scarcely a possibility of a doubt that the force, whatever it is, which determines the forms of crystals is inherent in the molecules of which the crystal is composed, and, perhaps, represents the position of the atoms in the molecules themselves. The theory of crystallization has been so elaborately worked out that it is second only to those of mathematics and chemistry itself in exactness. So accurate is it that the crystaline form of a substance unknown in other than a liquid or a gaseous state, and even that of a substance entirely unknown, but whose existence is possible, can be predicated with accuracy. This is the last and greatest test of a scientific theory. To most minds it is a complete proof of the cor

rectness of that theory. Crystalized water assumes the form of a hexagonal prism, not from chance, but because it is compelled to assume arrangement, and the arrangement of the molecules is due to the forms which Hall, at 8:30 oclock immediately following the Liberal Lecture by Mr. Charlsworth. Admission 10 cents.

Beginning Oct. 22, a daily tourist ear will be run from Chicago to the Pacific coast, via the great Rock Island route; Chicago to Kansas City, theuce Wichita and through the beautiful Indian Territor, via Fort Worth and El Paso, Tex. to Los Angeles and San Francisco. This car will leave Chicago daily on train No. Il at 6 p. m., and passengers taking this route will not only receive the benefit of very superior necommodations, but also will save a great many hours in time. The new southern route is particularly desirable in fall and winter season, and the well known reputation of the Rock Island insures passengers a comfortable trip. Our patrons are always provided for in the best manner possible, and these cars will be in charge of a Pullman conductor as well as porter, and everything pertaining to the comfort of our patrons will be carefully looked after and a pleasant trip guaranteed.

MR. AUGUSTUS THOMAS'

A trip to Southera California.

Beginning Oct. 22, a daily tourist car will the molecule or rather to the restrictions of their nester is tons of their nester rouse is pacifications of their several ranges of movement through their mutual attractions. This is the basis of the present theory of the formation of organics ment in a molecule it is perfectly possible to predict the range of their movement in a molecule and thence the probable character of a crystal which would be built up of many molecules. It is needless to say that it is unnecessary to carry the investigation of any compound back to the atoms and that the fact of a certain number and their several ranges of their movement through their mutual attractions. This is the basis of their research theory of the formation of organic receive the benefit of the formation of organic receive the benefit of the formation of the atoms and their mutual attractions. This is the basis of their several ranges of the rouse receive the benefit of the formation the atoms themselves assume within rangement they would assume and the crystaline form the molecules would take.

The little crystals which make up the snow are, therefore, the resultant of physical and chemical forces of the universe and each represents in its perfect form the unalterable character of the laws of nature, which regulate alike the shape of the great globe of the earth and the tiny feathery flake which falls on a coat sleeve on a dark winter's day. - Baltimore Sun.

Leather That Looks Like Velvet. The manufacture of leather is reaching what must be almost the highest perfection of the art. A new process has recently been patented in France for the production of a leather which, both to the touch and eye, has a striking resemblance to velvet. Leathers of this description hitherto manufactured have been obtained by treatment of the flesh side of the hide or skin. The flesh side of the skin being always coarse, the patentees claim now to secure better results by treating the hair side. They scratch or rub the hair side with a rubber of strong erosive qualities, or with emery or glass, when working small surfaces, and use a grindstone for heavier work. In this manner a downy nan is brought out which they throw and lay in different directions, thereby bringing out varied designs of changing hue and appearance. The velvety surface produced is said to be similar to the down of a peach skin. The fiber is very fine, soft to the touch, and has all the appearance of silk velvet shorn very close.-Shoe and Leather Gazette-

-Two famous Parisian prisons will shortly be demolished. They are the Roquette, near Pere Le Chaise cemetery, and the prison of Ste Pelagie, with its sorrowful souvenirs of the reign of terror. The government intends to build a large prison in their

Children Cry for Pitcher's Castoria.

GREAT GUNNING FEATS.

Quick and Destructive Work with Arm-strong Ordnance. The Armstrong Gun Co. has shown some very interesting experiments with the latest ordnance. A six-inch gun was fired four times in twenty seconds an eight-inch gun three times in thirty seconds. A torpedo was driven satisfactorily with cordite as a power. There was a search light which would keep its beam upon an object no matter how violently the vessel rolled. A ten-inch, thirty-ton gun, when it was in the mass its pure whitness and its fired opened the breech screw by the soft feathery character give snow a recoil and wound up a spring which, charm of its own, which has been cele- when released, would close the breech brated in proverb and poem in all ages | again. A 4 7-10 field howitzer anchored itself after the first discharge by driving a spade-shaped plate into the ground, after which its recoil was me by a jacket which surrounds it. A quick-firing field gun which anchors itself in a similar manner, fired five rounds of shrannel in fifty-three see onds. A fifteen-pounder mountain howitzer could be taken to pieces so that no part of it would weigh more than two hundred pounds. It is screwed together in five minutes. A six-inch gun with light portable disappearing mountings for a siege train could be taken apart so that no portion weighed more than three tons, ten hours being required to mount it A six-inch naval gun fired five rounds in sixty-nine seconds, each time at a dif-

ferent range and target. A plate of special steel designed for a shield received rifle and Gatling gun fire at one hundred yards range without a single penetration, while the plate hitherto used was punctured at every shot, the Gatling gun almost cutting it in two.— Chicago Herald. of the latter a deposit book on the Provident Institute for Savings, showing that Doyle had deposited there eighty dollars. The city marshal took possession of the book: Dovle served his sentence and on leaving prison was lost sight of. In 1824, it appears, Doyle died in Charleston, leaving so far as known no relatives or widow. In 1887 the bank book was found by a descend ant of City Marshal Radiam and turned es, show as plain as sunlight a vitigated November 30, 1887, filed a petition setting up the fact that Doyle had died in 1824, that he left no widow or next of kin so far as known and asking that his estate be administered upon. praisers were appointed and they filed an inventory showing that the eighty dollars deposit, by the addition of in-

on Doyle's heirs to come into court, and as none appeared the probate court for Suffolk county entered a decree by which the sum on deposit, now amounting to about two thousand and four hundred dollars, will go to the commonwealth. -- Boston Transcript. -A bell bigger than any in France is to be cast in Russia for the Cathedral

of Notre Dame in Paris. The cost of the gift will be covered by a public subscription among the Muscovites, and Cardinal Richard has signified his willingness to send an estimate of the weight which one of the towers of the cathedral will be able to bear. The Russians will also return two standards in exchange for those sent to ards in exchange for those sent to for the registration of voters, them from France a few years since.
